# My Chat App
## Utilizing HTML/CSS, JQuery, nodejs and Socket.io

I am implementing a web application for online chatting, that can handle over 10+
users. Have tested with three devices and 8+ users at a time.
Uses cookies to store state (username, and preferred color)

## To run:
```
git clone https://github.com/DanSohn/DanSohn.github.io.git
```
go into chat_app folder

in terminal:
```
npm install
```
```
node index
```

go to browser:
localhost:3010

enjoy probably talking to yourself in incognito and other browsers! Only supports
local network.
To run on different devices:
on the computer you are running the server on, go to cmd and type
```
ipconfig
```
and grab your ip address
replace localhost:3001 with your ip address:3001, so ex. 192.1.65.123:3001
